PROJECT REPORT

CSE001) DIGITAL LITERACY

Slot-D11, BL2025260501190
Winter Semester: 2026

Name of Student: ANKESH RAJ

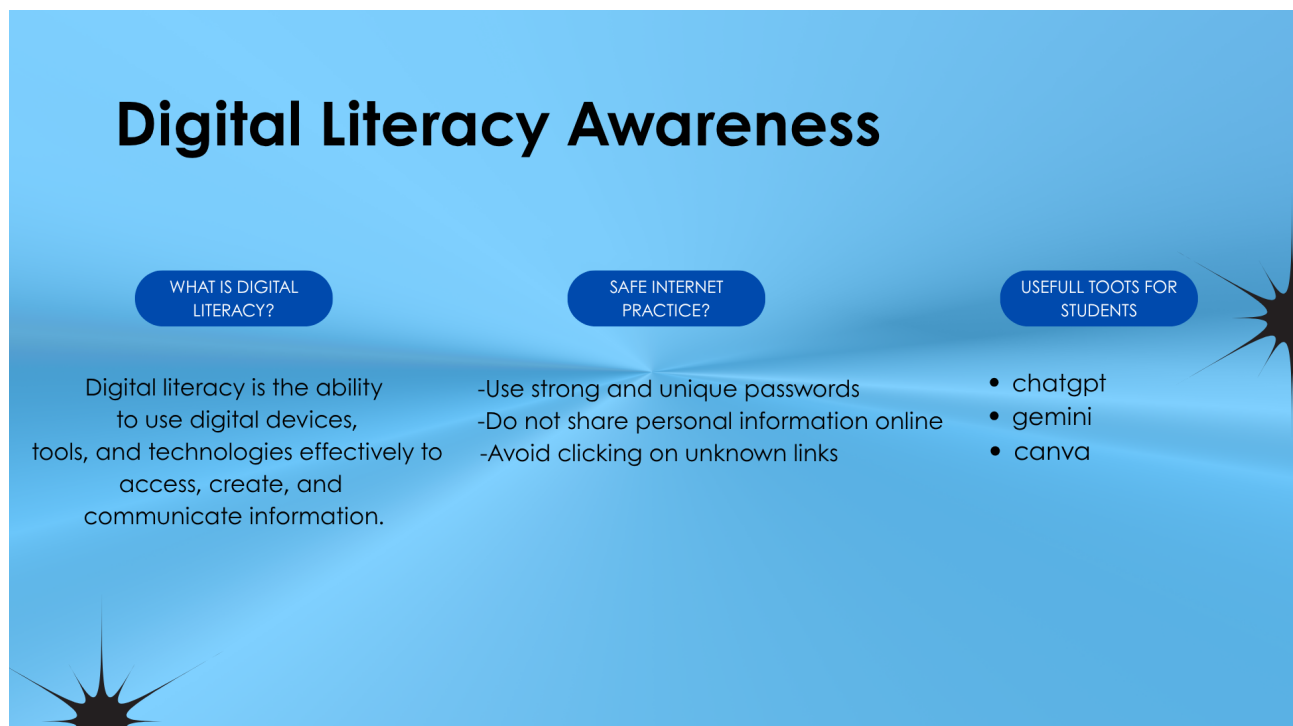

Registration Number: 25BAI11393

Guided By- Dr. Kannan

INTRODUCTION:-

Working on this project made me realize how important digital literacy is in both academic life and everyday activities. I learned how to use digital tools more safely, responsibly, and effectively. Throughout the project, I completed various tasks such as designing an infographic using Canva, creating and improving my profiles on LinkedIn, GitHub, and Kaggle, exploring coding platforms like HackerRank, writing professional emails with proper etiquette, and understanding cybercrime along with ways to prevent it. Each of these activities gave me hands-on experience and boosted my confidence in using different digital platforms. I also understood the importance of maintaining a professional online presence and being aware of potential risks on the internet. Overall, this project turned out to be a valuable learning experience that will support me in my future studies as well as my career.

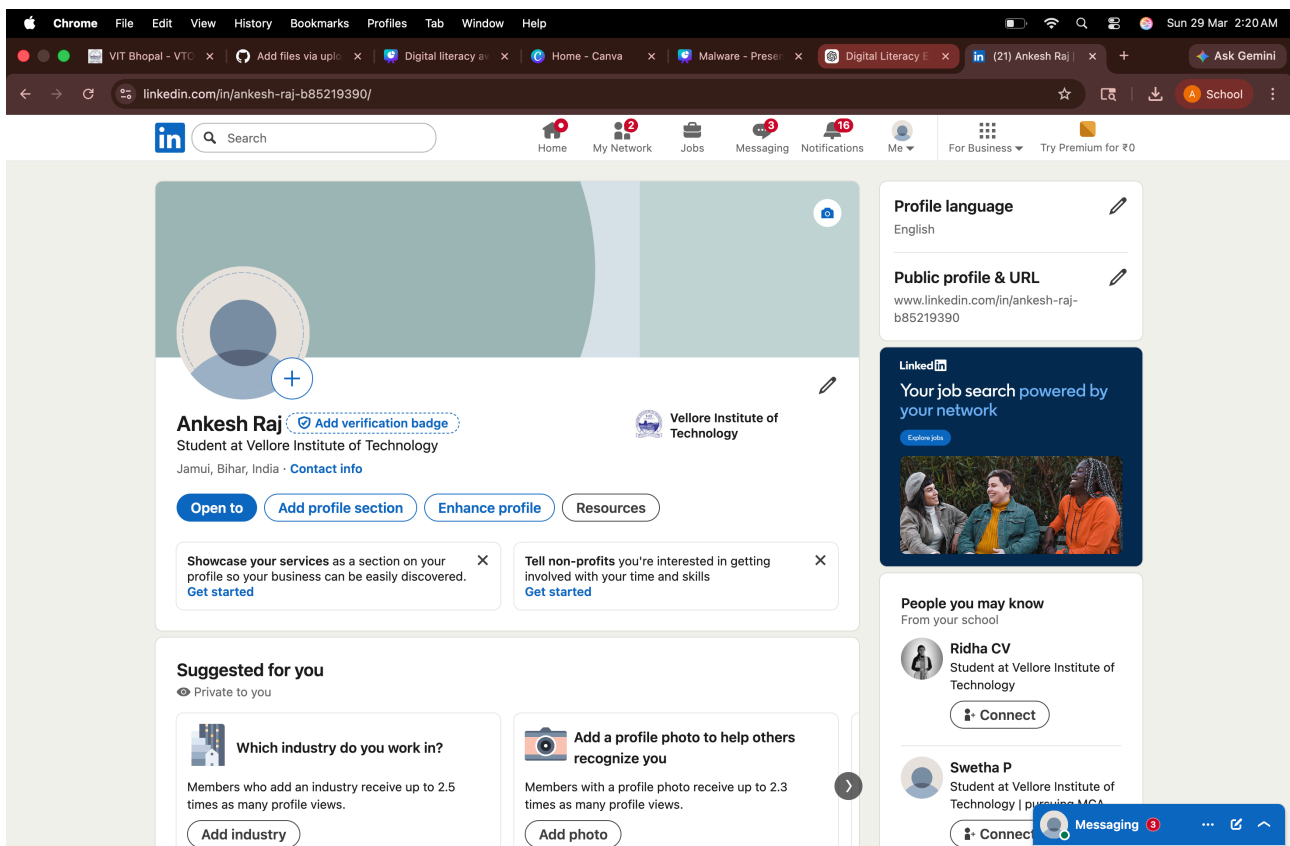

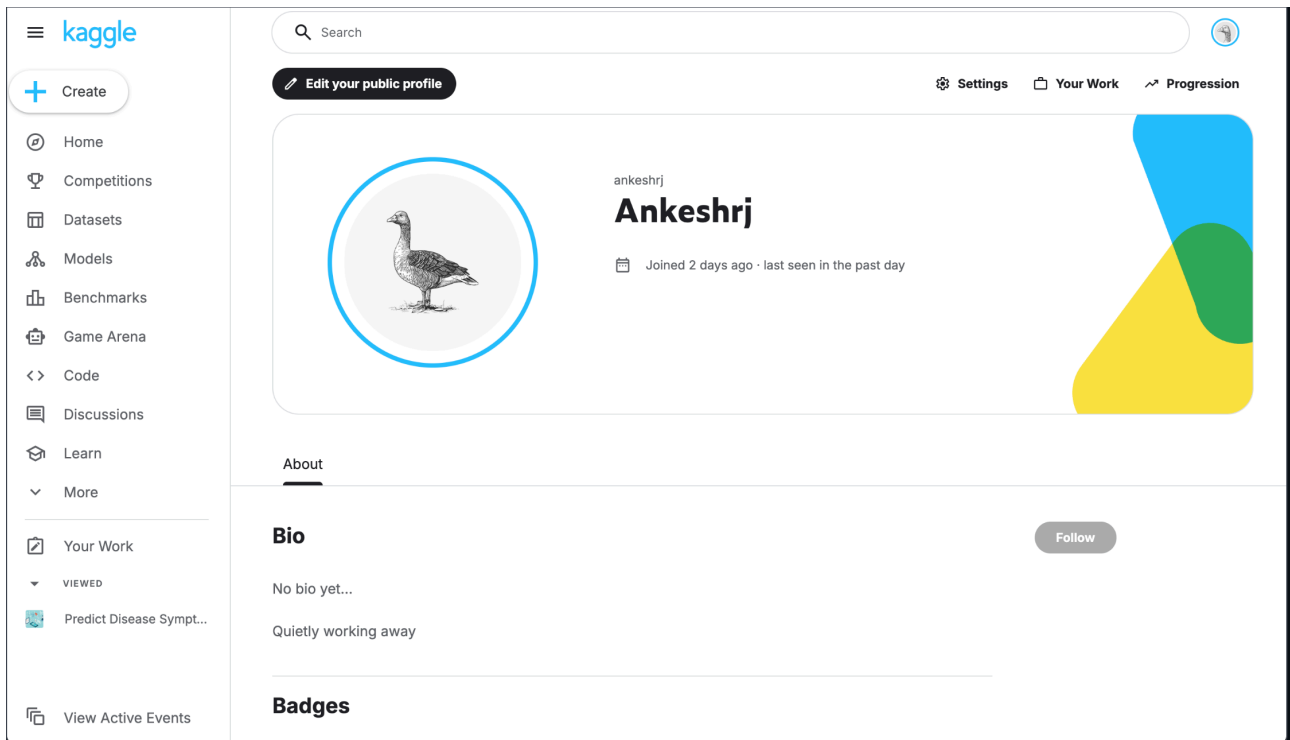

Task-1 Digital Literacy Awareness

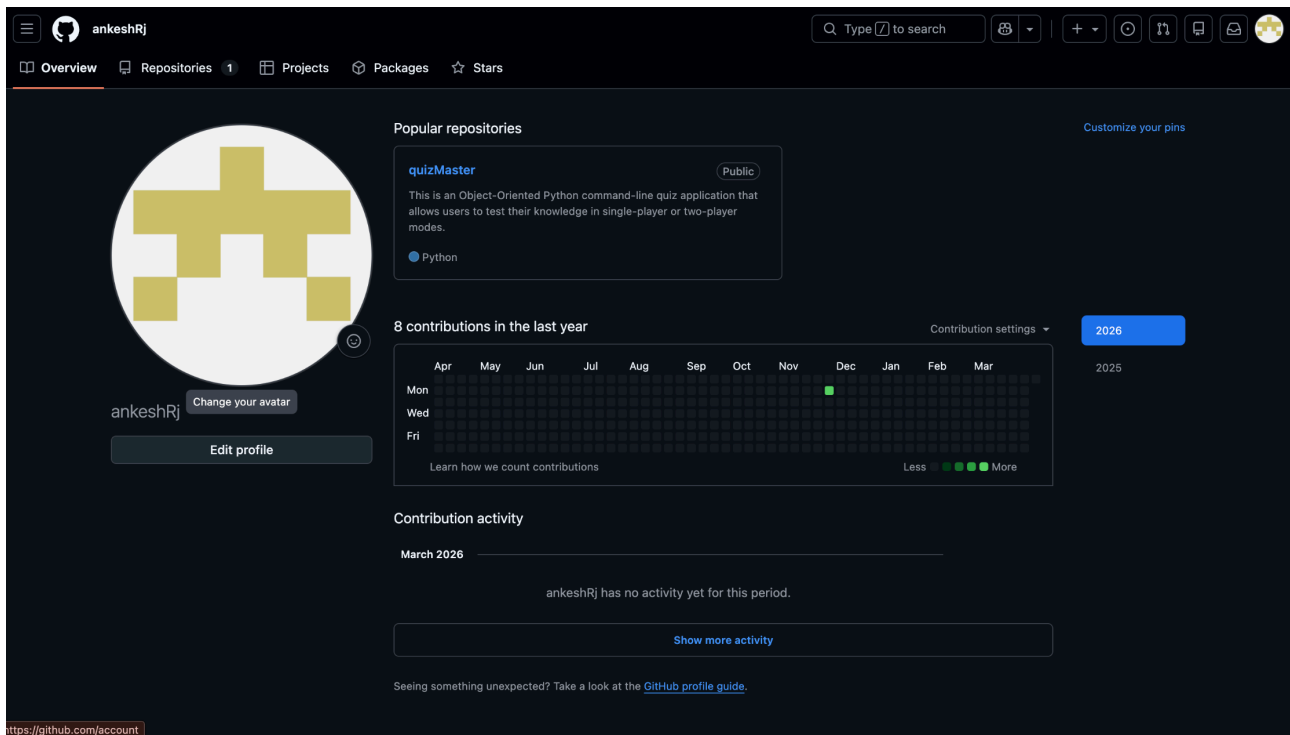

For this task, I used Canva to create an infographic about digital literacy awareness. I chose Canva because it's easy to use and has a lot of ready-made templates and design options, which made the work smoother. In my infographic, I included three main parts: the meaning of digital literacy, safe internet practices, and some useful digital tools for students. I kept the design simple by using a three-column layout, short text, and relevant icons so that it's easy to read and understand. While

working on it, I really enjoyed trying out different layouts and colour combinations to make it look attractive. At the same time, it was a bit tricky to fit all the information into limited space without making it look too crowded. Overall, this task helped me understand how important it is to present information in a clear and visually appealing way so that others can quickly understand it.

Task-2 Digital Portfolio

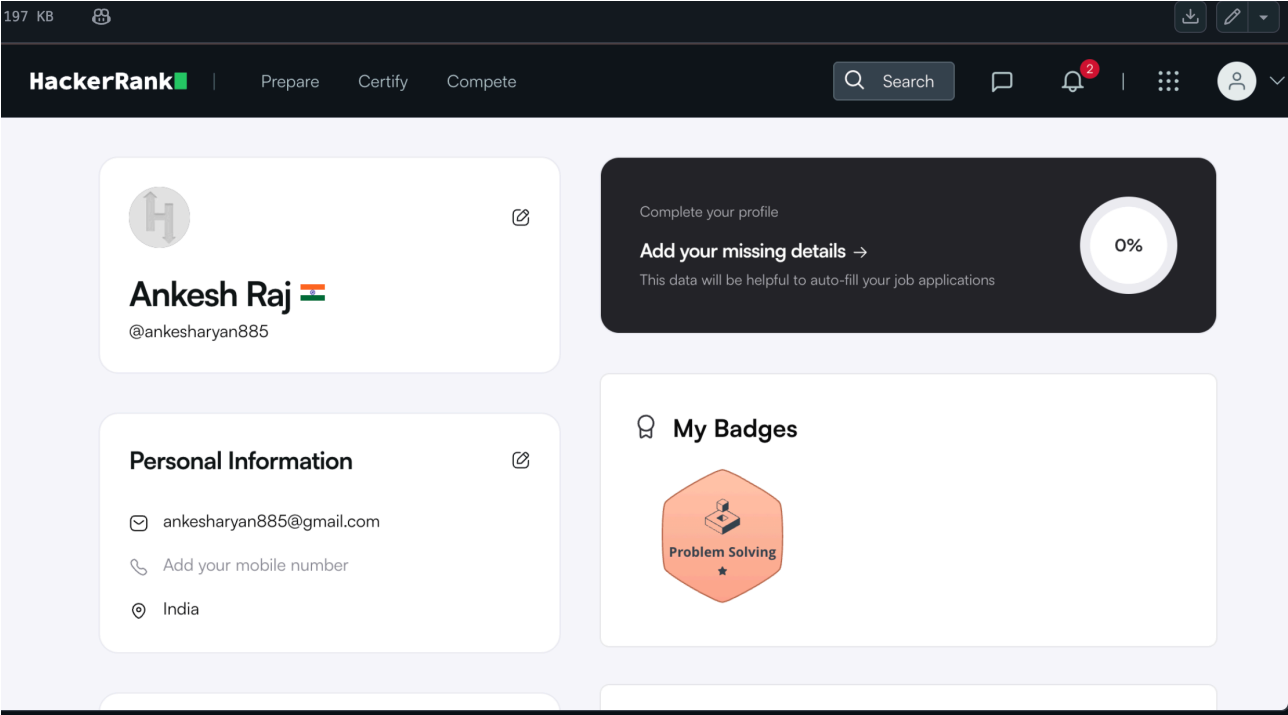

KAGGLE

In this task, I worked on building my digital presence by creating profiles on GitHub, LinkedIn, and Kaggle. Each of these platforms serves a different purpose. GitHub is great for uploading and sharing coding projects, LinkedIn helps in creating a professional network and connecting with people, and Kaggle is useful for learning data science, exploring datasets, and running code on the cloud. I also created a README for my GitHub profile where I briefly introduced myself and shared my interests. On LinkedIn, I added my educational details and built a basic professional profile. I believe these platforms will be very useful for me in the future. I plan to regularly upload my projects on GitHub, use LinkedIn to look for internship opportunities, and continue learning new skills through Kaggle. Overall, this task helped me understand how to build a strong digital presence and why it is so important in today's time.

Task-3 Coding and Collaboration

All Submissions

In this task, I got hands-on experience with both coding and collaboration tools. I started by creating an account on HackerRank and solved a basic problem. It gave me a clear idea of how coding platforms work and helped me build confidence in solving problems step by step.

For the second part, I made a survey using Google Forms with five questions based on digital literacy awareness. I included a mix of multiple-choice and short-answer questions. After collecting responses, I used Google Sheets to view and organize the data, which helped me understand how information is collected and analyzed.

I found this task quite interesting because it showed how these tools can be applied in real academic work, like conducting surveys or practicing coding. Overall, it helped me improve my technical skills and gave me a better understanding of how these platforms are used in practical situations.

Task-4 Professional Email & Etiquette Guide

In this task, I learned how to write professional emails in a proper and effective way. I wrote two emails—one for requesting an extension on an assignment and another for applying to a summer internship. Through this, I understood how important it is to have a clear subject line, use polite and respectful language, and follow a proper structure while writing emails.

I also made a checklist of Do's and Don'ts for social media usage. This made me realize how much our online behaviour can impact our image. Simple mistakes like sending unclear or overly casual emails can leave a negative impression or even hurt someone's feelings.

Overall, this task helped me improve my communication skills and taught me how to behave more professionally in digital spaces.

Task-5 Cybercrime Awareness & Prevention

In this task, I learned about cybercrime, mainly focusing on UPI and online payment fraud. I understood how scammers try to fool people by creating a sense of urgency and convincing them to share OTPs or enter their UPI PIN. What really surprised me was how easily people can fall for these tricks without realizing the risk.

This task made me more alert and careful while using digital payment apps. Now, I will make sure not to click on any suspicious links or share any personal or sensitive information with anyone. It also made me realize that being aware is the best way to stay safe from cybercrime and helped me understand practical ways to avoid such frauds.

Conclusion-

This project gave me a clear understanding of how important digital literacy is in today's world. It helped me learn how to use different digital tools more effectively, communicate in a professional way, and stay safe while using online platforms. I also realized the importance of building a strong digital presence and being aware of cyber threats.

Each task in the project helped me develop practical skills that I can use in both my studies and future career. Overall, this experience increased my confidence in using digital platforms in a responsible and efficient way.
